# Trends in Public Attitudes about Confidence in Institutions

**Tom W. Smith and Jaesok Son**  
**May, 2013**

On average the public's confidence in institutions has declined over the last four decades. (For the wording of this and all other questions see Appendix 1: Question Wordings. For full percentages for all years, see the attached tables.) As Figure 1 shows, across the 12 institutions measured from 1973 through 2012 the average saying they had a great deal of confidence fell from 29.9% in 1973-1977 to an all-time low of 22.6% in 1993-1996. (All subsequent figures on confidence in this report are the percent with a great deal of confidence.) Confidence then rebounded slightly before slumping to a second low point of 23.3% in 2008-2012. Similarly, a scale covering 13 institutions (adding Banks and Financial Institutions to the other 12) from 1975 through 2012 fell from an average of 29.2% in 1975-1977 to a record low of 22.3% in 1993-1996 and after some recovery declined to a second low point of 22.6% in 2008-2012 (Figure 1). On the 13-item scale confidence even declined slightly from 22.9% in 2010 to 22.1% in 2012. While these averages show the general picture, there are distinctive trends for each institution.

Among the three economic institutions (Figure 2), confidence in Major Companies has typically risen and fallen with the business cycle. Confidence fell to a record low with only 13.0% having confidence in 2010 in the middle of the Great Recession. It has since moved up to 17.3%, but this is still well below the long-term average of 23.6%. Confidence in Banks and Financial Institutions has been highly responsive to financial turmoil dipping to a low of 12.0% in 1991 during the savings-and-loan crisis and to an all-time low of 10.5% in 2010 following the mortgage and financial crash. Even in 2012, it was still at its second lowest point (11.8%). Confidence in Organized Labor has been low throughout the last 40 years (with an average of only 11.7%) and declined from the 1970s to the 1980s and early 1990s bottoming out at 7.8% in 1993. Then a modest rebound occurred with confidence in the 11-13% range ever since. There was no appreciable drop during the recent economic downturn.

The four governmental institutions have very distinctive trends (Figure 3). Confidence in the Supreme Court has shown only modest variation and slight decline. Its low point occurred in 1980 (24.2%). Recently, it has however slipped from 36.0% in 2002 to 28.7% in 2012. Confidence in Congress has slipped over time with low points in 1993 and 2012 (6.5-6.6%). Confidence in the Executive Branch of the Federal Government has generally followed presidential approval ratings and shows a series of peaks and valleys. In 2012 at 14.3%, it is well above the Congressional rating (6.6%), but below its long-term average (16.6%). The Military is the one institution that shows a rise over time. Confidence was at a low

point in 1978-1982 (29.3%) following the fall of South Vietnam, the Iranian hostage crisis, and the Soviet invasion of Afghanistan. Confidence surged to 60.6% in 1991 during the first Iraq war and again in 2002 and 2004 (respectively to 55.8% and 58.3%) after the invasion of Afghanistan and the start of the second Iraq war. Confidence in 2012 at 54.6% remains well above the long-term average (39.3%).

The two media institutions show similar, general declines over the four decades (Figure 4). Confidence in the Press fell from a high of 28.3% in 1976 to an all-time low of 8.5% in 2008. Confidence was still at its second-lowest reading (8.8%) in 2012. Confidence in TV dropped from 23.0% in 1974 to a low point of 9.0% in 2006 and was up slightly to 10.2% in 2012. Both have however bottomed out with little additional decline over the last 20 years. Overall the decline for the Press has been slightly greater than that for TV.

The final four institutions deal mostly with learning and knowledge. On average they have had higher ratings than the economic, governmental, and media groups, but with one exception have shown decline over time (Figure 5). The exception is that confidence in the Scientific Community has varied little and shown no decline. The 2012 rating of 39.7% is very close to the long-term average of 40.2%. Confidence in Education has decreased over time from a high of 49.0% in 1974 to low points of 23.7% in 1993-1996 and 25.6% in 2012. Confidence in Medicine dropped from 61.0% in 1974 to a low of 37.5% in 2002-2004. In 2012, it was at its third lowest point with 38.9%. Confidence in Organized Religion has had a general decline and has fallen in response to religious scandals. It decreased from a high of 44.5% in 1974 to a low of 20.5% in 1988 during the televangelist scandals, rebounded to 27.6% in 2000 before plummeting to a record low of 18.9% during the Catholic sex-abuse scandals. It came back up somewhat to 24.1% in 2006 before slipping to 19.9% in 2008-2012.

Men have had more confidence in institutions than women do over the past four decades. Organized Religion is the only exception with women above men by 1.8 percentage points. Most of the gender differences are small, but men have notably more confidence than women do in the Scientific Community (+9.2 points), the Military (+7.6 points), and the Supreme Court (+6.8 points).

As previous research has found (Smith, 2012), confidence tends to be high among older cohorts, to bottom out among the baby-boomers and then rise among more recent cohorts. In 2012, those under 35 had the highest confidence in 10 of 13 institutions (Banks and Financial Institutions, Major Companies, Organized Labor, Executive Branch, Congress, Press, TV, Education, Medicine, and the Scientific Community). Across age groups in 2012, they had the lowest confidence in Organized Religion (16.4%) while those 65+ had the highest (25.9%). But in the most recent years those under 35 were generally

second highest after the 65+ group, so the 2012 results may be an exception. Those under 35 were also lowest in 2012 in confidence in the Military, but the cohort differences were small and this pattern did not show up in other recent years.

Educational differences were examined by looking at differences across all years and taking the percent among the college educated who said they had a great deal of confidence and subtracting the percent of those with no high school degree with a great deal of confidence. A positive score indicates greater confidence among the better educated and a negative score more confidence among the less educated. Confidence is higher among the better educated when rating the Scientific Community (+24.1 points), the Supreme Court (+12.7 points), and Major Companies (+8.6 points). Confidence is higher among the less educated for Education (-13.9 points), TV (-13.0 points), the Military (-10.2 points), Organized Labor (-9.4 points), Organized Religion (-8.9 points), the Press (-7.8%), Banks and Financial Institutions (-7.0 points), Congress (-5.6 points), and Medicine (-1.8). There was no difference for the Executive Branch of the Federal Government (0.0 points).

The data in this report are from the General Social Survey. The GSSs are full probability, in-person samples of adults living in households in the United States. Data have been collected by NORC at the University of Chicago. Core support for the GSS comes from the National Science Foundation. Information on the GSS and the GSS data files are available at <http://www.norc.org/GSS+Website>.

## Appendix 1: Question Wordings

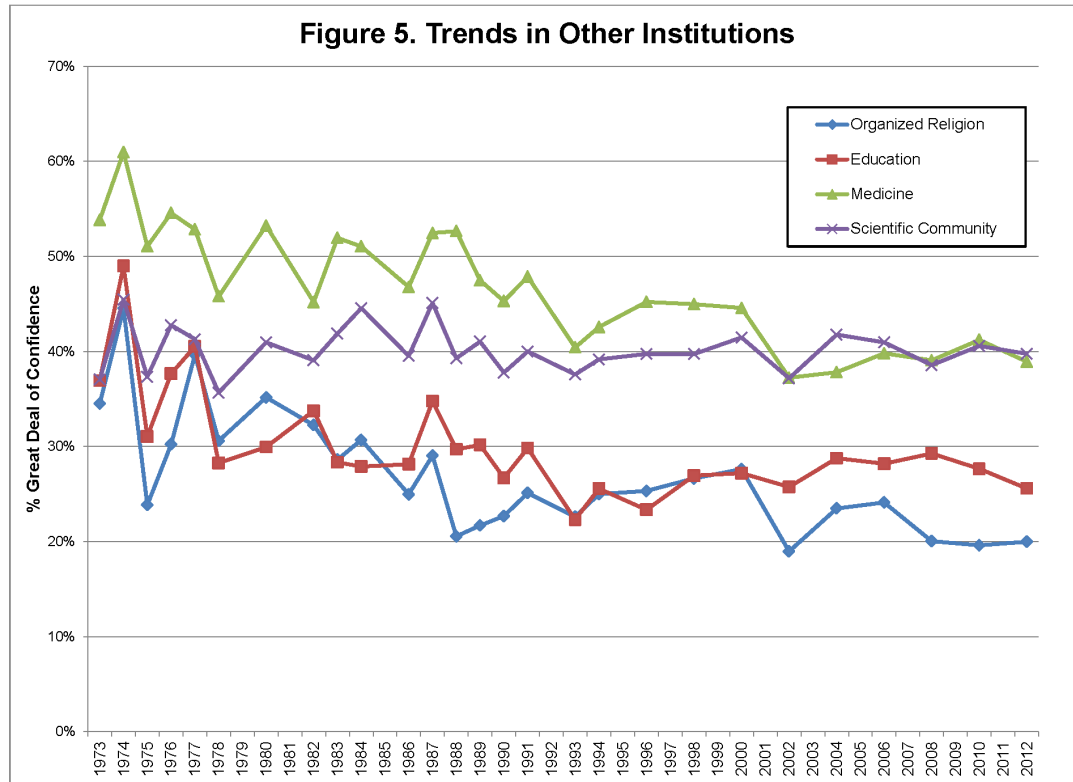

I am going to name some institutions in this country. As far as the people running these institutions are concerned, would you say you have a great deal of confidence, only some confidence, or hardly any confidence at all in them?

- a. Banks and Financial Institutions
- b. Major Companies
- c. Organized Religion
- d. Education
- e. Executive Branch of the Federal Government
- f. Organized Labor
- g. Press
- h. Medicine
- i. TV
- j. U.S. Supreme Court
- k. Scientific Community
- l. Congress
- m. Military
